COMPANY · XETRA · RHM

Rheinmetall

Report of 06 Oct 2026 Price at research €953 **GRAY ZONE · BUY < €700**

Gray zone. A good business at a fair price, with no cushion if things go wrong.

WHY

- Record €80bn order backlog, up 44%. Ammunition earns a 26–29% margin.
- Free cash flow was –€1.6bn in the first half of 2026, despite record profit.
- €953 already assumes management roughly delivers its 2030 plan of €50bn in sales.

WHAT THE SHARES COULD BE WORTH

CASE	VALUE	VS €953
Bear if it goes badly	€447	–53%
Base as expected	€1,101	+16%
Bull if it goes well	€1,899	+99%

Margin of safety below €700.

3-year scenario targets, discounted to today at 9%.

€953 ≈ 5,101 lei a share, at National Bank of Romania rates of 06 Oct 2026.

NEXT CHECKPOINT

Q3 2026 results, early November 2026. They show whether cash flow is recovering.

IF YOU DON'T OWN IT

Wait. The framework's margin-of-safety zone starts below about €700, or wait for proof of cash conversion (H2 2026 FCF turning strongly positive).

IF YOU OWN IT

The thesis is intact as long as the backlog keeps growing and FCF recovers in H2. Treat it as a cyclical position, not a forever compounder.

SIGNALS TO ADD

- ☐ Price below €700 with the thesis intact
- ☐ H2 2026 FCF > €1.5bn showing that working capital reverses

SIGNALS TO SELL

- ☐ FY2026 cash conversion well below 40%
- ☐ Another guidance cut
- ☐ A large equity raise
- ☐ A durable ceasefire combined with EU budget delays

DATES TO TICK OFF

	WHEN	WHAT	WHAT TO CHECK
☐	≈ 05 Nov 2026	**Q3 2026 results** Date not confirmed: Early November 2026	FCF, working capital, order intake. They show whether cash flow is recovering.
☐	05 Jan 2027	**Refresh the verdict**	It turns 90 days old; rerun the research before relying on it.

> Research date: 2026-10-06 · Price at research: **€953.00** (StockAnalysis, close 6 Oct 2026) · Currency: EUR Framework: AI Berkshire `/investment-research` (Buffett · Munger · Duan Yongping · Li Lu). Written in English at the reader's request. **Educational research only. Not investment advice.**

> **Currency and your money:** this report is written in euros. Price €953 ≈ 5,101 lei. National Bank of Romania reference rates of 6 Oct 2026: 1 EUR = 5.3527 lei. Figures in lei and euros are conversions at that day's rate and move with it.

0. Information richness rating and AI limitations

ITEM	ASSESSMENT
Information richness	**Grade A.** DAX member with 21+ sell-side analysts and heavy media coverage.
Main AI research trap	Consensus is strong. AI output tends to echo the market narrative ("rearmament supercycle"), so the bear case gets extra weight below.
Data gaps	Segment data was restated for the 2026 reorganisation (new Air Defence, Digital, Naval segments), so 5-year segment history isn't like-for-like. Most numbers come from company releases and secondary summaries (Investing.com, MarketScreener, StockAnalysis) rather than the full PDF filings.
Bias self-check	The sense of certainty comes mostly from the **€80bn backlog** (hard data). Whether that backlog converts into **cash** is far less certain (H1 2026 FCF was –€1.6bn).

1. Data collection and cross-validation

1.1 Key facts

METRIC	VALUE	SOURCE
Share price (6 Oct 2026)	€953.00 / €947.95	StockAnalysis / NAGA
Shares outstanding	46.67M	StockAnalysis, MarketScreener (46,668k)
Market cap	≈ €44.5bn (calculated)	Tool check, see 1.2
52-week range	€900 – €1,972 (closing high ~€2,007, Oct 2025)	StockAnalysis / ad-hoc-news
1-year price change	≈ –50%	StockAnalysis, NAGA
FY2025 sales	€9,935m (+29%)	Rheinmetall FY2025 release
FY2025 operating result	€1,841m (18.5% margin)	Rheinmetall FY2025 release
FY2025 EPS (continuing ops)	€22.73	Rheinmetall FY2025 release
FY2025 operating FCF	€1,218m	Rheinmetall FY2025 release
FY2025 dividend	€11.50 (1.21% yield)	Rheinmetall / StockAnalysis
Backlog (30 Jun 2026)	€80.5bn (+44%), of which €56.3bn firm	Q2 2026 slides
H1 2026 sales	€5,227m (+39%)	Q2 2026 slides

METRIC	VALUE	SOURCE
H1 2026 operating result	€786m (15.0% margin)	Q2 2026 slides
H1 2026 operating FCF	**–€1,616m**	Q2 2026 slides
Net financial debt (30 Jun 2026)	€2,722m, net debt/EBITDA 1.12x	Q2 2026 slides
Equity ratio	33.6% → 28.0%	Q2 2026 slides
2026 guidance	Sales €13.7–14.2bn, margin ≈19%, cash conversion >40%	Q2 2026 (cut by €300m after F126)
2030 ambition	≈ €50bn sales, >20% margin, >50% cash conversion	Capital Markets Day, Nov 2025
Consensus 2026E / 2027E / 2028E EPS	€34.13 / €50.44 / €70.49	MarketScreener
Consensus 2026E EPS (alt.)	€37.25	StockAnalysis (S&P Global)
Analyst price target (avg)	€1,608 (range €1,050–2,380), 21 analysts	StockAnalysis

1.2 Tool-verified checks (`financial_rigor.py`)

CHECK	RESULT
Market cap = €953 × 46.67M	**€44.48bn**. The reported €45.74bn is 2.8% off (likely a different share count, e.g. including dilution). Accepted.
Share price, 2 sources	✅ deviation 0.27%
2026E EPS, 2 sources	❌ deviation 4.4% (€34.13 vs €37.25). Likely different analyst sets or adjusted vs reported EPS. **Midpoint €35.69 used.**
Trailing P/E on FY2025 continuing EPS	953 / 22.73 = **41.9x**
Forward P/E on 2026E midpoint	≈ **26.7x** · on 2027E (€50.44) ≈ **18.9x**
Dividend yield	11.50 / 953 = **1.21%**
Share count change since end-2024	43.56M → 46.67M = **+7.1% dilution** (convertible/capital measures)

2. Business essence (Duan Yongping: "the right business")

In one sentence: Rheinmetall is Europe's largest land-systems and ammunition maker. It has turned into a **capacity-constrained supplier of consumables (shells, propellant) plus long-cycle platforms (tanks, IFVs, trucks)**, with governments as customers who prepay and sign framework contracts lasting many years.

SEGMENT (Q2 2026)	SALES	OP. MARGIN	CHARACTER
Vehicle Systems	€1,446m	12.5%	Lumpy platform programmes (Boxer, Puma, Lynx, trucks)
Weapon & Ammunition	€1,156m	**25.8%**	Consumables. The profit engine (29% margin in FY2025)
Digital Systems	€471m	9.6%	Electronics, C4I, newly carved out
Air Defence	€285m	16.3%	Skynex/Skyranger. In demand because of drones
Naval Systems	€257m	9.7%	NVL acquisition. Hit by the F126 cancellation

- **Model:** project-based hardware, but **ammunition behaves like a recurring business.** Shells get fired, stockpiles have NATO targets, and orders are framework contracts worth tens of billions over 6+ years.
- **Operating leverage:** strong. The margin went from 12.1% in H1 2025 to 15.0% in H1 2026 and is guided to about 19% for the year.
- **Weak spot:** working capital. To grow 30–40% a year the company is building inventory and plants ahead of cash receipts. Q2 2026 working capital rose by €1.9bn.

> **Duan's question: what makes this business good?** Ammunition. It is a high-margin consumable with few qualified Western suppliers. Vehicles are a decent business, not a great one (about 12% margin, competitive bids, political allocation).

---

3. Moat (Buffett: "economic moat")

MOAT TYPE	EVIDENCE	RATING
Pricing power	25–29% ammunition margins during a shortage. Governments accept it now, but budget scrutiny will come.	★★★
Switching costs	Platforms (Leopard 2 guns, Boxer, Puma) lock in decades of spares, upgrades and ammunition.	★★★★
Network effects	None in the classic sense. NATO standardisation creates some interoperability lock-in.	★
Scale	Largest 155mm capacity in Europe, plus vertical integration into powder and explosives (a real bottleneck).	★★★★
Tech/regulatory	Export licensing, security clearances and decades of qualification. New entrants need 5–10 years.	★★★★

Trend: the moat widened sharply from 2022 to 2026 as capacity became the binding constraint. **Risk to the trend:** once European and US competitors (Nammo, KNDS/Nexter, BAE, Czechoslovak Group, US GOCO plants) add capacity, the scarcity premium shrinks. Capacity moats tend to weaken with time.

> **Buffett's question: will this moat exist in 10 years?** The *qualification and political* moat probably will. The *scarcity pricing* moat probably won't at today's margins. What could break it: an EU push to "spread work across member states", or a peace deal that cuts urgency.

---

4. Inversion and risks (Munger: "invert, always invert")

FAILURE PATH	PROBABILITY (JUDGEMENT)	IMPACT
Lasting Ukraine ceasefire leads to slower procurement and order deferrals	Medium. Every 2026 truce attempt failed within days, but US-led talks restarted on 25 Sep 2026.	High for sentiment, medium for fundamentals (NATO 3.5% GDP targets are structural)
Political programme cancellations (F126 precedent, June 2026: –18% in a day)	Medium	Medium: <3% of the 2030 plan per management
Cash conversion keeps disappointing, forcing debt or equity raises	Medium	High: equity ratio already fell to 28%, and shares were diluted +7% since 2024
2030 plan (€50bn) slips because of execution, labour, permitting	Medium-high	High: the price already implies roughly hitting the plan (see §7)

FAILURE PATH	PROBABILITY (JUDGEMENT)	IMPACT
Margin pressure as governments push back on prices	Medium (from 2028)	Medium
Key-person dependence on CEO Papperger	Low-medium (contract runs to 2030)	Medium
ESG exclusion or fund flows reversing	Low-medium	Affects the multiple only

Historical analogy: US defence primes after the Cold War (1989–1995). Budgets fell about 30% in real terms, the industry consolidated, and stocks re-rated *down* before the survivors compounded. A less severe analogy is 2003–2011, when US contractors grew backlog fast, but valuations peaked early in the cycle and stayed range-bound while earnings caught up.

Bias check:

- *Narrative bias:* "Europe must rearm" is true, but it is also *known* and was priced at the €2,000 peak.
- *Anchoring:* "50% below the high" is not a valuation argument by itself.
- *Survivorship:* defence booms have also produced losers (overexpanded capacity, fixed-price contracts).

Bear arguments (short sellers / skeptics): (1) negative FCF despite record profits, (2) growth depends on prepayments and political will, (3) guidance cuts in 2026, (4) consensus EPS for 2027–28 assumes near-flawless execution.

> **Munger's question: where am I most likely wrong?** Treating the **backlog as cash.** €80bn in orders isn't €80bn in free cash flow, and H1 2026 shows how much capital is needed to deliver it.

---

5. Management (Duan: "the right people" + Buffett: integrity)

YEAR	DECISION	RESULT	SCORE
2013	Papperger becomes CEO and keeps the defence focus when it was out of fashion	Positioned the company for the 2022+ cycle	★★★★★
2022–24	Aggressive capacity build (Unterlüß ammunition plant, Expal acquisition in Spain) before contracts were signed	Massive backlog growth. Bold, and it paid off.	★★★★★
2025	Exit civilian/automotive (power systems moved to discontinued ops)	Cleaner pure play	★★★★
2025–26	NVL naval acquisition	Badly timed: F126 cancelled months later	★★
2026	Capex and inventory surge, FCF deeply negative	Too early to judge. Necessary for growth, but strains the balance sheet.	★★★

- **Alignment:** Papperger holds shares, but the stake is small relative to the market cap. This is not an owner-operator. Pay is tied to sales and operating result, which **rewards growth more than cash returns**.
- **Track record on guidance:** 2025 results missed forecasts, and 2026 guidance was trimmed. The company is promotional, with frequent large headline targets.

> **Duan's question: if the CEO retired, would the company stay competitive?** The *capacity* would remain. The deal-making and political network are heavily tied to Papperger, so key-person risk is real but limited until 2030.

---

6. Industry and civilisational trend (Li Lu)

- **Paradigm:** Europe has moved from a post-1991 "peace dividend" to sustained rearmament. European defence spend went from ~€287bn (2022) to a projected ~€630bn (2026). Germany's equipment share of its budget rose from 17% to 32%. Bernstein projects ~4% annual EU defence budget growth through 2035.
- **This is a regime change, not a technology revolution.** Rearmament cycles historically last 10–20 years and then fade. Rheinmetall isn't riding something like electricity or the internet. It's riding a **policy cycle**, which is more reversible.
- **Technology risk:** drones and cheap precision weapons may shift spending from heavy armour toward air defence, electronics and loitering munitions. Rheinmetall is pivoting (Air Defence and Digital segments), but its core earnings are still shells and vehicles.
- **Customer concentration:** Germany accounts for 38% of sales. Other European governments and Ukraine-related procurement make up much of the rest, so political exposure is very concentrated.

> **Li Lu's question: in 20 years, is this the Standard Oil of its era or a 3Com?** Neither. The likeliest outcome is a durable but cyclical national champion, closer to General Dynamics than to Standard Oil. A good business, but no compounding monopoly.

---

7. Valuation and margin of safety (Buffett + Duan)

7.1 Current multiples (tool-verified)

METRIC	VALUE
Trailing P/E (FY2025 continuing EPS €22.73)	41.9x
Forward P/E 2026E (€35.69 mid)	≈ 26.7x
Forward P/E 2027E (€50.44)	≈ 18.9x
Dividend yield	1.21%
Peers (forward P/E, approx., 2026)	Leonardo ~23x, BAE ~29x, Hensoldt ~48x

7.2 Three scenarios, 3 years (`financial_rigor.py three-scenario`)

Base EPS: €35.69 (2026E midpoint). Horizon: 3 years (to ~2029).

SCENARIO	EPS GROWTH P.A.	EXIT P/E	2029 EPS	TARGET PRICE	VS TODAY	DISCOUNTED TO TODAY AT 9%
Bull: plan delivered, Europe stays hot	35%	28x	€87.81	€2,459	+158%	€1,899
Base: growth slows, multiple normalises	22%	22x	€64.81	€1,426	+50%	**€1,101**

SCENARIO	EPS GROWTH P.A.	EXIT P/E	2029 EPS	TARGET PRICE	VS TODAY	DISCOUNTED TO TODAY AT 9%
Bear: peace plus budget fatigue plus execution slip	5%	14x	€41.32	€578	–39%	€447

Note: consensus already projects 2028E EPS of €70.49, above the base case. The base case deliberately haircuts the sell-side.

7.3 Reverse DCF: what does €953 imply?

At a 9% required return and ~1% net payout yield, today's €44.5bn market cap needs to grow to **€96bn by 2036**. At the framework's steady-state exit P/E of 12.4x, that requires **≈ €7.7bn of net profit in 2036**.

The 2030 plan (€50bn sales × 20% margin) implies an operating result of about €10bn and net profit of about €6.8bn. **So the current price assumes management roughly delivers its 2030 plan *and* keeps growing modestly after that.** The price isn't assuming collapse, but it isn't cheap either.

7.4 Ten-year discounted valuation (`terminal_value.py`)

Inputs:

INPUT	VALUE	REASONING
r (cost of capital)	**9%** (10% sensitivity)	EUR cash flows. The tool has no EUR band, so the USD band (9–11.5%) was used. That is slightly conservative for EUR, where the Bund is lower than US Treasuries.
Steady-state incremental ROIC	**15%**	Between today's very high ammunition ROIC and the lower returns typical of vehicles and naval work at the end of a cycle
g (perpetual growth after 2036)	1% / 2% / 3%	Below eurozone nominal GDP

Audit: ✅ PASSED. C1 currency consistency ✓, C2 r–g ≥ 5pct ✓ (8.0 / 7.0 / 6.0pct), C3 discrete risks kept out of r ✓.

Exit P/E = (1 – g/ROIC) / (r – g) = **12.4x** at r=9%, or **10.8x** at r=10% (base g=2%).

10-year IRR from €953:

2036 NET PROFIT SCENARIO	EXIT 12.4X (R=9%)	EXIT 10.8X (R=10%)
Bear €2.25bn (cycle fades, ~€25bn sales × 9% net margin)	–3.6%	–4.9%
Base €4.4bn (~€40bn sales × 11%)	**+3.1%**	+1.7%
Bull €7.8bn (~€60bn sales × 13%)	+9.1%	+7.6%

Ranking stays the same at both r levels. Only the bull case clears a 9% hurdle. The price at which the **base case** earns 9% a year over 10 years is **≈ €540**.

Discrete risks: Ukraine peace → scenario. EU budget reversal → tail case. Contract cancellation → probability. Working-capital strain → scenario. **Papperger key-person risk → not modelled** (see Limitations).

> **Buffett's question: if r is off by 2 points, does the conclusion flip?** No. At both 9% and 10%, the base case returns low single digits. The conclusion depends on the *business outcome* (whether 2036 profit is €4bn or €8bn), not on the discount rate.
>
> **Duan's question: if the market closed for 5 years, would you hold at this price?** Only if you believe the 2030 plan with high confidence. The 2026 cash flow and guidance trims argue for caution.

7.5 Price bands

ZONE	PRICE RANGE	MEANING
Margin of safety	**< €700**	Close to the bear-case value. Base case ≥ ~7% over 10 years.
Gray zone	**€700 – €1,100**	Fair if consensus is roughly right. Little cushion if it isn't. **Today's €953 is here.**
Expensive	**> €1,400**	Requires the bull case

In your money: what this means in lei

- **Price:** one share €953 ≈ 5,101 lei; the margin-of-safety level of €700 ≈ 3,747 lei. National Bank of Romania reference rates of 6 Oct 2026: 1 EUR = 5.3527 lei.
- **Return:** The base case is +3.1% a year over ten years in euros (at a 9% discount rate), in a range of −3.6% to +9.1%. A return in lei is that figure plus or minus the change in the lei price of the euro. Between 26 Feb and 9 Oct 2026 the leu lost 10.2% against the dollar and 4.8% against the euro (BNR reference rates), which shows how much the exchange rate alone can move a lei result.
- **Inflation:** Romanian inflation was 6.2% a year in August 2026 (INS). The National Bank of Romania forecasts 6.1% for end-2026 and 3.4% for end-2027. The base case is below current inflation and about level with the end-2027 forecast, before any exchange-rate effect.

---

8. Decision memo

DIMENSION	CONCLUSION	CONFIDENCE
Business quality (Duan)	Good. Ammunition is excellent, vehicles and naval are average.	★★★★
Moat (Buffett)	Real but cyclical. The scarcity premium will erode.	★★★
Management (Duan + Buffett)	Visionary and bold, but promotional and growth-incentivised	★★★
Biggest risk (Munger)	Backlog doesn't turn into cash. Political or peace-driven slowdown.	★★★★
Civilisational trend (Li Lu)	Multi-year rearmament regime, but a policy cycle rather than a secular tech shift	★★★
Valuation (Buffett + Duan)	**Gray zone.** Fair on 3-year consensus (€1,100), expensive on strict 10-year steady-state math (€540).	★★★

Framework verdict: GRAY ZONE (watch). Not a fat pitch at €953.

SITUATION	FRAMEWORK'S SUGGESTION
No position	Wait. The framework's margin-of-safety zone starts below about €700, or wait for proof of cash conversion (H2 2026 FCF turning strongly positive).
Already holding	The thesis is intact as long as the backlog keeps growing and FCF recovers in H2. Treat it as a cyclical position, not a forever compounder.
Sell signals	FY2026 cash conversion well below 40%. Another guidance cut. A large equity raise. A durable ceasefire *combined with* EU budget delays.
Buy-more signals	Price below €700 with the thesis intact. Or H2 2026 FCF > €1.5bn showing that working capital reverses.

Tiered strategy by investor type

(Borrowed from the `/investment-team` format. These are generic investor profiles, not a recommendation for any individual. Portfolio-percentage sizing is deliberately left out because that depends on each person's finances.)

INVESTOR TYPE	FRAMEWORK VIEW	PRICE RANGE
Aggressive (believes the 2030 plan, accepts 40%+ swings)	Price is below the 3-year base value (€1,101), so it's defensible to start at current levels, accepting a bear-case drop toward €450–580	€900 – 1,000
Moderate	Wait for Q3 2026 results (early Nov). Act only if free cash flow is turning positive and guidance holds.	€750 – 900
Conservative	Doesn't meet the 10-year certainty bar (base case ≈ 3% a year at €953). **Pass** unless the price reaches the margin-of-safety zone.	< €700

Mirror Test (from `/investment-checklist`)

> "I buy Rheinmetall at **€953** because:
>
> 1. The business is **Europe's leading land-systems and ammunition supplier, with ammunition as a high-margin consumable**. I understand it. ✅
> 2. Its moat is **qualification, switching costs and scarce capacity**. It's wide today but likely to **narrow** as competitors add capacity. ✅ (with caveat)
> 3. Management is **bold and has executed the build-out well, but is promotional and growth-incentivised, and the 2026 guidance was trimmed**. Trustworthy, but verify. ⚠️
> 4. The price is roughly **at or above** intrinsic value on strict 10-year math (base ≈ €540) and **about 13% below** the 3-year base value (€1,101). **There's no real margin of safety.** ❌
> 5. If I'm wrong, the downside is **about –40 to –50%** (bear case €447–578). That's **only bearable for a small position**. ⚠️ "

Result at €953: NOT PASSED. Sentence 4 fails, so under the checklist rule the answer is don't buy at this price. **At ≤ €700, sentence 4 would likely pass.** That's about 36% below the 3-year base value (€1,101) and much closer to the strict 10-year value (€540), so the remaining downside to the bear case would shrink to about –17% to –36% (vs –39% to –53% today). The test would be re-run then.

The four masters (simulated)

> **Buffett:** "I like businesses whose customers can't do without them, but I'm wary of businesses where the customer is one government with an election every four years. And when profits rise while cash goes out the door, I want to know why before I write the cheque."

> **Munger:** "Invert it. What kills this? Peace, politicians, and too much capital chasing too few contracts. All three are plausible within a decade. At 27 times earnings, you're paying for none of them happening."

> **Duan Yongping:** "Ammunition is a good business. Is the whole company a good business at this price? I'd want to see the cash first. If I don't understand when the money comes back, I don't buy."

> **Li Lu:** "Europe's rearmament is a real historical turn, and Rheinmetall is its leading national champion. But champions of policy cycles rarely compound like champions of technology cycles. The margin of safety has to come from price."

Limitations, AI confidence vs investment certainty

- **AI analysis confidence: medium-high** for reported figures (company releases, 2+ sources), **medium** for consensus EPS (the two sources differ by 4.4%), and **low** for 2036 profit scenarios, which are judgement calls.
- **Investment certainty: medium-low.** The business is real and the backlog is real. What's uncertain is the *duration of the cycle* and *cash conversion*, and more data won't remove that uncertainty.
- **Not modelled:** CEO key-person risk (Papperger, contract to 2030). The full details of the convertible bond and dilution. FX exposure. US market upside (excluded from the 2030 plan).
- **Tool caveat:** `terminal_value.py` has no EUR mode. The USD band was used as a proxy, and its risk-free and ERP baseline (4.70% plus a China country premium) is more conservative than a EUR-specific build would be. A lower EUR r (e.g. 8%) would raise exit P/E to about 14.4x and lift base IRR by roughly 1.5pct. That still sits below a 9% hurdle.
- **Next things to verify yourself:** Q3 2026 results (early November 2026): FCF, working capital, order intake. Ukraine talks outcome. Germany's 2027 budget.
